Track: Book-Applied

Chapter 4: Applied: Performance Tuning and Throttling [Advanced]

Chapter focus: Performance Tuning and Throttling** *(Level: Advanced)

Avoid plugin recursion and nested sync workflows. Batch plugins should use ExecuteMultiple. Monitor API service protection limits. Index alternate keys for integration idempotency. Archive old cases to maintain performance.

Code Reference:

```
# Service protection API limit: 429 Too Many Requests -> exponential backoff
```

What it shows: Throttling guidance informs integration retry policies.

Topic guide

What it actually is

Performance tuning keeps CRM responsive at enterprise scale.

When to use it

High-volume portals and integration-heavy orgs.

Where to use it

Global service teams with millions of cases yearly.

Real use example

Archive job moves closed cases >2 years to long-term storage-grid load improves 40%.

Chapter 5: Applied: Power Pages and External Portals [Advanced]

Chapter focus: Power Pages and External Portals *(Level: Advanced)**

Power Pages (formerly portals) expose Dataverse data externally with authentication, entity lists, forms, and Web API. Configure table permissions and web roles carefully-portal security misconfigurations are common breach vectors.

Code Reference:

```
# Web role: District Admin | Table permission: Account Read scope Parent
```

What it shows: Portal permission comments document external access model.

Topic guide

What it actually is

Power Pages deliver secure customer and partner self-service.

When to use it

Case submission, knowledge bases, and partner registration.

Where to use it

Education districts accessing support without full CRM license.

Real use example

District admin submits case via portal-creates CRM case with correct entitlement.

Chapter 6: Applied: Event Framework and Async Processing [Advanced]

Chapter focus: Event Framework and Async Processing *(Level: Advanced)**

Use async plugins and Azure Functions triggered by Dataverse events for heavy processing. Service Bus topics decouple publishers. Custom APIs provide typed operations for LWC/canvas clients needing transactional bundles.

Code Reference:

```
// Custom API: cq_ProvisionTenant bundles 5 internal operations atomically
```

What it shows: Custom API comment shows operation bundling pattern.

Topic guide

What it actually is

Event-driven extensions scale beyond synchronous limits.

When to use it

Provisioning, ERP sync, and ML inference side effects.

Where to use it

Large SaaS operators on Dynamics platform.

Real use example

Tenant provision API rolls back all steps if sandbox creation fails.
