Chapter 4: Applied: Full Stack Developer Role Map [Beginner]

Chapter focus: Full Stack Developer Role Map** *(Level: Beginner)

Full stack developers own features from database to UI, coordinating across layers. You understand how HTTP requests flow from browser to server to database and back as JSON. Breadth is your strength-depth grows in frontend or backend specialization over time. Modern stacks pair React SPAs with Node APIs and PostgreSQL for relational data.

Code Reference:

```
// Client
const res = await fetch('/api/tasks');
const tasks = await res.json();

// Server (Express)
```

```
app.get('/api/tasks', async (req, res) => {
  const { rows } = await pool.query('SELECT * FROM tasks ORDER BY id');
  res.json(rows);
});
```

What it shows: fetch calls same-origin API; Express queries Postgres and returns JSON array.

Topic guide

What it actually is

Full stack development spans client, server, database, and deployment layers.

When to use it

Choose when you want ownership of entire features and rapid prototyping ability.

Where to use it

Startups, agencies, indie products, and small product teams.

Real use example

Solo founder ships MVP in weeks because one person wires UI, API, and DB together.

Chapter 5: Applied: HTML/CSS/JS Browser Foundations [Beginner]

Chapter focus: HTML/CSS/JS Browser Foundations** *(Level: Beginner)

The browser parses HTML into DOM tree, applies CSS cascade, and executes JavaScript. Document Object Model APIs let scripts read and mutate page content dynamically. Event delegation handles clicks efficiently on lists rendered from data. fetch replaces legacy XMLHttpRequest for HTTP from the browser.

Code Reference:

```
document.querySelector('#add-btn').addEventListener('click', async () => {
  const title = document.querySelector('#title').value;
  await fetch('/api/tasks', { method: 'POST', headers: { 'Content-Type':
'application/json' }, body: JSON.stringify({ title }) });
  loadTasks();
});
```

What it shows: Click handler reads input, POSTs JSON, then reloads task list.

Topic guide

What it actually is

Browser APIs connect user interactions to backend services via HTTP.

When to use it

Master before adopting React-concepts transfer directly to component event handlers.

Where to use it

Legacy pages, lightweight widgets, and understanding framework abstractions.

Real use example

Todo widget on marketing site POSTs new items without full SPA framework.

Chapter 6: Applied: Node.js and Express Server Basics [Beginner]**Chapter focus: Node.js and Express Server Basics** *(Level: Beginner)**

Node.js runs JavaScript on the server with non-blocking I/O event loop. Express adds routing and middleware chain for HTTP request processing. Middleware parses JSON bodies, logs requests, and handles errors uniformly. Organize routes in modules as API surface grows.

Code Reference:

```
const express = require('express');
const app = express();
app.use(express.json());
app.get('/api/health', (req, res) => res.json({ status: 'ok' }));
app.listen(3000);
```

What it shows: express.json() parses POST bodies; health route confirms server running.

Topic guide**What it actually is**

Express is the minimal web framework for Node.js REST APIs.

When to use it

Use for JSON APIs serving React SPAs and mobile clients.

Where to use it

CRUD backends, webhooks, and server-rendered hybrids.

Real use example

Mobile app consumes Express JSON API hosted on same domain with reverse proxy.

Track: Book-Plan

Chapter 7: Study Plan and Practice [Beginner]**Chapter focus: Study Plan and Practice** *(Level: Beginner)**

Finish Eloquent JavaScript with a weekly plan: read one section, write a summary, complete one exercise, and reflect on how it applies to Full Stack Web Developer. If a free edition exists, practice every example. Submit your notes and one mini-project demo for teacher review.

Code Reference:

```
Week 1: Read + notes
Week 2: Exercises
Week 3: Mini project
```

Week 4: Review + quiz

What it shows: A 4-week plan turns reading into demonstrable skill.

Topic guide

What it actually is

Structured study plans improve retention and portfolio outcomes.

When to use it

After finishing the key topics chapters.

Where to use it

CodeQuest end-of-unit assessments.

Real use example

A learner completes the study plan and uploads a beginner project screenshot.
